

## TECHNICAL SPECIFICATION

### Analogue panel frequency meter SD72 type for build-in

#### Description

Analogue devices adjusted for mounting on the front panel of electrical boards. Designed for frequency measurement, capacity, alternating or direct voltage and current of the power supply grid, with overall dimensions 72x72mm. They are manufactured on the basis of bridge measurement schemes. There is possibility for display change for the higher scopes of measuring.

| Type             | Type of the measurement system | Precision class | Range   | Packing / Box (pcs) | Catalogue number |
|------------------|--------------------------------|-----------------|---------|---------------------|------------------|
| frequency meter* | ME                             | 0.5             | 45-65Hz | 1 / 50              | 50126            |

\* Possibility for voltage 110V, 230V, 400V

**Standards:**

EN 60051-1
